Module Introduction

Utility Module serves multiple purposes. It is like a back end module using which all the major settings for other modules can be made as per the requirement of the Institute.

Here, one can create Logins for all the entities along with the scope of rights which are to be assigned. The module also provides the freedom to create customized templates for the reports of all the other listed Modules. Templates for Form/ Certificate type Reports can be created using Editor Templates. Templates for various Receipts can be created using Custom Templates. One can also generate I-Cards using Card Templates. After creating customized templates, one can also view their actual look using the Reports section.

The ERP gives the option to send E-mail and SMS to the entities. For this, the some basic settings are required which can be done using the Utility Module. Utility Module can also be used to track the activities of the users using the Activity Log. It also allows to customize the ERP Dashboard. It is a centralized module using which other modules can be managed. Any changes made in the Utility Module, are immediately reflected in the other respective Modules. Payment Gateway setups is also a part of this module.
